Yogesh Botcha

+1 (706) 912-0229 | EMAIL | LINKEDIN | PORTFOLIO

SUMMARY

Software Developer specializing in building secure, AI-powered applications and scalable full-stack solutions using Java, Spring Boot, React, Angular, and SQL. Experienced in integrating Large Language Models (LLMs), developing intelligent microservices, and preparing data for AI-driven systems. Combines expertise in software engineering, applied AI, and cybersecurity to deliver reliable, secure, and intelligent applications.

EDUCATION

Columbus State University — Columbus, GA
Master of Science in Cybersecurity — August 2024 – May 2026

CMR Technical Campus — Hyderabad, India
Bachelor of Technology — July 2018 – August 2022

TECHNICAL SKILLS

AI and Data: LLM Fine-tuning, Tokenization, RAG, pandas, NumPy, RAG, Tableau, Power BI.
Programming and Web frameworks: Java, Python, JavaScript, Go, Rust, TypeScript, C, C++, Spring Boot, React, Angular, HTML, CSS
Databases and Tools: MySQL, SQL, PostgreSQL, Redshift, Splunk, ELK Stack, Git
Cloud and Systems: AWS(ECS, Lambda, RDS, SQS, API Gateway, Amplify), Azure, Linux, VMware

EXPERIENCE

Columbus State University — Columbus, Georgia
Research Intern — July 2026 – Present

- Develop AI agents designed to perform cybersecurity-related tasks as part of faculty-led research initiatives.
- Evaluate AI agents for security vulnerabilities, expanded attack surfaces, and other potential cybersecurity risks.

Columbus State University — Columbus, Georgia
Graduate Administrative Assistant — Jan 2025 – May 2026

- Contribute to university AI/ML research by cleaning datasets, fine-tuning Large Language Models (LLMs), and experimenting with image-generation models for academic branding.
- Apply advanced data preprocessing, tokenization, and model training workflows to enhance research outcomes.

Columbus State University — Columbus, Georgia
Student Research Assistant — Oct 2025 – Jan 2026

- Collaborated on a cybersecurity research project focused on advanced network intrusion detection methods.
- Developed and evaluated techniques to enhance system resilience against obfuscation and chaff-based evasion.

Kyndryl — Hyderabad, India
Technical Support Analyst Senior Agent — Oct 2023 – June 2024

- Managed user identity and access controls (IAM) via password resets and account provisioning, ensuring adherence to the principle of least privilege.
- Conducted advanced network troubleshooting, ensuring SLA compliance and minimal downtime across enterprise IT environments.

Shanti Switchgears Private Limited — Hyderabad, India
Java Developer Intern — Jun 2022 – Jun 2023

- Developed web and hybrid mobile applications for employees and vendors using Java, Angular, and Spring Boot, integrating REST APIs and MySQL database operations through Hibernate.
- Implemented OAuth 2.0 and JWT authentication, resolved application and database issues, and optimized performance to support more than 1,000 users.

PROJECTS

WorkOnWheels (WOW) | Personal Project
Re-architected and migrated a full-stack booking system (Java/Spring Boot/Angular) to AWS, transitioning from a local environment to a scalable cloud infrastructure. Optimized application delivery using Amazon EC2 and S3, while improving data reliability by migrating the backend to Amazon RDS. Implemented Auto Scaling and Elastic Load Balancing to ensure high availability for users during peak booking periods.

Diabetes Risk Prediction | Academic Project

Developed a machine learning model using the Random Forest algorithm on a Kaggle dataset to predict patient diabetes risk. Implemented the SMOTE technique to resolve data imbalance, ensuring high model accuracy and unbiased classification of high-risk cases. Conducted a comparative analysis of predictive performance metrics to validate the effectiveness of the Random Forest and SMOTE approach.

AI Voice Agent | Academic Project
Built an intelligent voice agent integrating speech recognition, language generation, and text-to-speech modules with custom voice cloning for real-time, natural human-AI conversations.
